Rifat Azim

Data Scientist & Machine Learning Engineer

Data Science: Python (NumPy, Pandas, Scikit-learn, TensorFlow, Keras, OpenCV, Django, etc)

Web Development: PHP, JavaScript, CSS, Bootstraps & HTML

A final year Computer Science and Engineering student with over 3 years of experience in Data science, Machine Learning, Web Development, and Video Editing, currently seeking a reputed and collaborative company to enhance and sharpen my skills and contribute to the company's success.

Education

- 2019 - Present
  BSc in Computer Science & Engineering
  North South University
- 2016 - 2018
  Higher Secondary School Certificate
  Govt. Science College

Expertise

- Machine Learning
- Web Development
- Artificial Inteligance
- Social Media Marketing
- Video Editing

Language

- Bengali (Native)
- English (Bilingual)

Projects

Knowledge Distillation approach towards Alzheimer's Disease

2023

Knowledge Distillation is a deep learning technique. This technique transfers knowledge from a large teacher model to a precise, concise and smaller student model, and has hyperparameter tuning system embedded within the architecture.
In my final year project, I used a kaggle dataset to predict whether a patient has Alzheimer's disease using augmented MRI images. I used ResNet50 to train the teacher model, which had roughly 87% accuracy and the student model gave us an outstanding 91% accuracy, which highlights my proficiency in machine learning, data visualization and model optimization.

Bank-Marketing Dataset: Classification & Evaluation Metrics

2023

The dataset used in this project is the Bank Marketing dataset obtained from the UCI Machine Learning Repository. It includes various features related to client information, campaign details, and economic indicators. The primary target is binary: whether a client subscribed to a term deposit ('yes' or 'no').
This ML project highlights Data Preprocessing, Exploratory Data Analysis, Model Training, Model Evaluation, Hyperparameter Tuning, Cross-Validation, and Model Deployment.

Point of Sale: Inventory Management System

2021

Point of Sale (POS) is a software-based modern business system which facilitate the transaction process and inventory management.
I built this system mostly using PHP and laravel framework, CSS and HTML to construct the backend and design the frontend. I also used MySQL and XAMPP for database handling and data storing. This was a semester-long project and I was able to create this production-level website from the scratch and successfully meet the requirements of my honorable faculty.
